Scope of the procurement

revi

***Title:** Rehabilitation of existing network

Reference EIB-GtP/ENERGY
number: ECEPP ID: 41177772

The Works include design, manufacture, testing, supply, delivery to the Port of shipment, inland transport to Moldova and to the site of erection, including port clearances and insurance from the port warehouse to the site stocking area, construction, erection, commissioning, guarantee and setting to work.

The primary objective of the procurement is the comprehensive rehabilitation of the primary and secondary High Voltage (HV) and Medium Voltage (MV) equipment associated with the power transformer sides at multiple designated Moldelectrica substations.

The Works cover all 110/x kV and 35/x kV substations included within the Tender scope and comprise, as applicable, the rehabilitation and replacement of primary and secondary equipment, relay protection and control systems, auxiliary systems and DC supply systems.

***Short description:**

Estimated total contract value
excluding VAT:

38,700,000

Currency: EUR

*Description of the procurement

The Works include design, manufacture, testing, supply, delivery to the Port of shipment, inland transport to Moldova and to the site of erection, including port clearances and insurance from the port warehouse to the site stocking area, construction, erection, commissioning, guarantee and setting to work.

The primary objective of the procurement is the comprehensive rehabilitation of the primary and secondary High Voltage (HV) and Medium Voltage (MV) equipment associated with the power transformer sides at multiple designated Moldelectrica substations.

The Works cover all 110/x kV and 35/x kV substations included within the Tender scope and comprise, as applicable, the rehabilitation and replacement of primary and secondary equipment, relay protection and control systems, auxiliary systems and DC supply systems.

Due to the diversity of the existing network infrastructure, the substations included in the Tender scope are grouped according to the existing Single Line Diagram (SLD) on the 110 kV or 35 kV side, the existing layout and structural characteristics of the transformer bay, the applicable relay protection, control and auxiliary systems configuration, their installation location, and the existing DC auxiliary supply arrangement.

To ensure engineering standardization, ease of operation and long-term maintenance efficiency, the Employer has adopted a Modular Architecture Strategy. Accordingly, the Employer's Requirements are based on a set of standardized, pre-engineered technical solutions, referred to as "Building Blocks", which are adapted to the specific configuration and existing conditions of each substation.

The procurement is therefore intended to provide standardized, reliable and maintainable solutions while ensuring compatibility with the existing Moldelectrica network infrastructure and improving the operational performance and long-term maintainability of the substations

Up to 100% of costs, excluding any taxes and duties applicable in the Borrower's country, are expected to be financed from the proceeds of the loan and grant funds earmarked by the EBRD, EIB and EU NIP for the Project

The Procurement Process (using Multi-Stage Open Competitive with Prequalification Procedure) is conducted using the EBRD Client E-procurement portal, ("ECEPP") and subject to its terms and conditions of use. Participants shall register with ECEPP in accordance with the terms and conditions of ECEPP use, as published on ECEPP. Only the Participants, who are registered and who have expressed

an interest in the Procurement Process, shall be able to access the Procurement Document, receive clarifications, addenda and amendments and submit their proposals through ECEPP. A Participant from any country may participate in the procurement process.

A Tender Security in the form of an unconditional bank guarantee in the amount of 300,000 EUR is required to be submitted - ONLY together with final proposal.
